

# Osman Ali Elma

---

## About Me

I have nearly two years of experience in Front-End development, primarily using JavaScript, React.js, and Next.js. In recent months, I have been improving and expanding my skills in system administration. I manage my own Linux-based AaPanel server and deploy my projects to production. With my experience in both coding and deployment, I aim to continue my career as a software developer capable of handling both development and integration processes.
